

# Lab 4 – Vibe Coding Chat History

Student: Dhanraj Rathod | SRN: PES1UG24AM359

Repository: DhanrajRathod18/59\_rock\_paper\_scissor

Purpose: Record of the Lab 4 work, Git/GitHub submission, and final submission steps.

## 1. Project and Lab 4 Workflow

The Lab 4 task was to fork the assigned Rock Paper Scissors repository, run the Python project, record the game before changes, use Vibe Coding prompts to fix/add the required features, keep separate commits for each task, record the final version, and push the completed work to the student's fork.

## 2. Coding Work and Four Required Tasks

### *Task 1 – Fix outcome evaluation*

The original winner evaluation was inverted. The rules were corrected so that ROCK beats SCISSORS, SCISSORS beats PAPER, and PAPER beats ROCK. The corrected rules awarded the winner to the player or CPU correctly.

**Commit: c313c65 — Fix rock paper scissors outcome evaluation**

### *Task 2 – First to X Wins*

A target score of 5 was implemented. The match stops when either side reaches five wins, displays a match-winning banner, and provides an R-key restart option.

**Commit: ad40b8f — Implement first to five match mode**

### *Task 3 – Adaptive AI pattern tracking*

The game records the player's recent throws, keeps the latest five, detects a repeated favorite when appropriate, and biases the CPU toward the counter-move. Restarting clears the history.

**Commit: e700176 — Add adaptive AI pattern tracking**

### *Task 4 – Procedural gesture icons and reveal animation*

Distinct procedural Rock, Paper and Scissors icons were added. Before the actual choices are shown, the game displays a short 3–2–1 reveal sequence with a shake/reveal animation. The actual choices are then displayed with the result positioned above the buttons.

**Commit: b104047 — Add gesture icons and reveal animation**

## 3. Testing and Final State

The First-to-5 feature was tested successfully, including a 5–2 match result and the “YOU WIN THE MATCH!” banner. Adaptive AI behavior was tested by repeatedly selecting ROCK and observing frequent PAPER responses. The gesture icons and reveal animation were also tested, and the final layout was adjusted so the result text did not overlap the choice buttons.

## 4. Git Commit Verification

The final four commits were verified with **git log --oneline -4**:

b104047 (HEAD -> main) Add gesture icons and reveal animation

e700176 Add adaptive AI pattern tracking

ad40b8f Implement first to five match mode

c313c65 Fix rock paper scissors outcome evaluation

## 5. Fork and GitHub Submission

The local repository initially pointed to the SETAPESU26 upstream repository. To follow the faculty instruction to fork the repository, a fork was created under DhanrajRathod18. The local Git remote was then changed to the personal fork before pushing.

**Final remote:** [https://github.com/DhanrajRathod18/59\\_rock\\_paper\\_scissor.git](https://github.com/DhanrajRathod18/59_rock_paper_scissor.git)

The push completed successfully with: 72e89d3..b104047 main -> main

The GitHub page then showed the repository as DhanrajRathod18/59\_rock\_paper\_scissor and "This branch is 4 commits ahead of SETAPESU26/59\_rock\_paper\_scissor:main".

## 6. Final Video and Google Sheet Submission

The final after-video was recorded after all four tasks were completed. The student's Lab4 row in the Google Sheet was then updated with the personal GitHub repository link.

**SRN:** PES1UG24AM359    **Name:** Dhanraj Rathod

**Submitted GitHub link:** [https://github.com/DhanrajRathod18/59\\_rock\\_paper\\_scissor](https://github.com/DhanrajRathod18/59_rock_paper_scissor)

## 7. Submission Checklist

- Forked assigned GitHub repository
- Completed all four Lab 4 coding tasks
- Created separate Git commits for each task
- Pushed final code to personal GitHub fork
- Recorded before video
- Recorded final after video
- Entered GitHub repository link in the Lab4 Google Sheet
- Chat history prepared/exported as PDF

Note: This document is an export-style Lab 4 chat/work record prepared from the conversation context available in this session. It does not include hidden system/developer messages or unavailable portions of the conversation.
